WEST MICHIGAN ACADEMY OF
ENVIRONMENTAL SCIENCE

INTRODUCING OUR SECONDARY PATHWAYS PROGRAM

In 9th grade, students will be introduced to the different pathways through coursework and opportunities to hear from community speakers representing each area. This exploration helps students learn about the options and identify their interests before selecting a pathway.

Beginning in 10th grade, students will choose one of the pathways listed below to help shape their learning around their interests and future goals. As they progress through high school, their coursework will continue to build and deepen within that area of focus. Each pathway follows a sequence of courses that guides students through a focused plan of study aligned with their chosen field.

THE PATHWAYS

NATURAL SCIENCE

BUSINESS & SUSTAINABILITY

HEALTH & WELLNESS

ADDITIONAL OPPORTUNITIES

Students will also have opportunities to enrich their pathway through specialized electives, college-level coursework, and experience-based learning. These opportunities allow students to apply what they are learning in meaningful ways while gaining deeper exposure to their chosen field of study.

Additional details about each pathway, including course options and learning opportunities, will be shared soon. We look forward to providing these new and unique experiences for our students.
